

Operational oversight. Real-time visibility. Safer custodial environment.

In a busy custodial environment, prisoners need to move between residential units, education, healthcare, workshops, visits, appointments, and regime activity. Staff need to know who is expected, who has arrived, who is still in transit, and where attention may be needed.

Unilink's Biometric Movement Tracking gives establishments a live operational view of movement, attendance, scheduling, and location activity through one connected system.

By linking movement workflows with biometric verification, attendance monitoring, dashboards, and audit trails, the platform helps staff manage daily movement with greater accuracy and accountability.

This reduces reliance on paper-based processes and manual checks, while supporting faster roll management, clearer attendance records, and improved coordination between teams.

Live visibility of planned and actual movement across the establishment.

A connected system for safer movement management

Designed specifically for custodial environments, Biometric Movement Tracking integrates with Unilink's Staff Platform, Staff Portal, Scheduling, Secure Visits Management, Self-Service, and offender management systems.

Built around your establishment.

Supporting safer, more efficient daily regimes

Flexible and configurable, Biometric Movement Tracking adapts to local operating models while helping establishments strengthen movement control, improve attendance visibility, and support safer, more efficient daily regimes.

Real-Time Movement Visibility

Live prisoner location and transit visibility

Controlled movement with integrated risk alerts

Site-wide operational dashboards and oversight

Complete movement history and audit trails

Scheduling and Attendance

Activity and appointment scheduling

Live attendance and participation monitoring

Punctuality, refusals and absence reporting

Regime planning and operational coordination

Identity Verification and Control

Biometric fingerprint and facial verification

PIN and multi-factor authentication

Controlled movement through secure checkpoints

Identity assurance with complete audit trails

Operational Insight and Integration

Live roll and accommodation status

Operational insight into movement delays

Incident review and investigation support

Integrated reporting across operational workflows

Support safer movement management with real-time operational visibility.
